Strength, Style & Versatility

Innovative Aluminum Systems maintains certification to apply the advanced superdurable AAMA 2604 and specialized 2605 powders. These cutting-edge powders not only outlast standard powders but also boast superior 5 and 10-year gloss retention ratings. While many railing manufacturers opt for the basic AAMA 2603 powders, which offer only 1-year protection against chalking and fading, we at Innovative Aluminum Systems prioritize durability. As a standard, we employ the resilient 5-year AAMA 2604 powders and are also accredited to use the robust 10-year AAMA 2605 variants.

Our commitment to excellence is further demonstrated by our 5-stage, full submersion pre-treatment process. This meticulous approach ensures we consistently achieve top grades in the rigorous independent certification tests, administered annually by our esteemed powder manufacturers.

At Innovative Aluminum Systems, we place the utmost importance on quality and consistency. Through rigorous daily testing, meticulous maintenance, and strict adherence to procedures, we ensure our powder coating consistently meets and exceeds AAMA specifications.

Our confidence stems from the synergy of our passionate team, exceptional powders, and time-tested processes. This combination guarantees a stunning, high-quality finish that will remain pristine for years to come.
