Strength, Style & Versatility

Innovative Aluminum Welded Picket Systems provide a robust yet elegant solution for your railing needs. Available for top or fascia mounted applications, our versatile Welded Picket Systems are offered in a wide range of colors, top rail styles and heights. Choose from either the traditional 5/8" picket or broad slat picket designs.

We combine the durability of aluminum and ultra-durable powder coated finishes from our own industry leading powder coating line. This outstanding combination gives you the assurance of structural integrity while drastically reducing long term maintenance and repair costs.

All of our components are precision fabricated and go through a stringent, multi-level quality assurance program to ensure we meet the highest standards expected from today's consumer.

We are confident that our railings will add lasting elegance, richness and distinction to any home, making Innovative Aluminum Systems the premier name in quality railings.

At Innovative Aluminum Systems we are a dedicated group of professionals who are committed to delivering the highest quality products and total customer satisfaction. We are here to assist you in... *"Taking your railing concepts to completion".*

Strength, Style & Versatility

Innovative Aluminum Systems is certified to apply the next generation of superdurable AAMA (American Architectural Manufacturers Association) 2604 and custom 2605 powders. These powders have been found to hold up longer than regular powders and are associated with higher 5 and 10 year gloss retention ratings. Where many railing manufacturers settle for lesser AAMA 2603 powders associated with 1-year protection from chalking and fading, we at Innovative Aluminum Systems apply the more durable 5-year AAMA 2604 powders as standard, and are certified to apply the robust 10-year AAMA 2605 powders.

Using superior powders in combination with our 5-stage, full submersion pre-treatment process, helps us attain top passing marks during the gruelling independent certification tests conducted annually by our quality powder manufacturers.

Quality and consistency is important to us at Innovative Aluminum Systems. Daily testing, regular maintenance and a stringent adherence to procedures allow us to ensure that our powder coating is well within AAMA specifications.

We are confident that the combination of our dedicated staff balanced with outstanding powders and proven processes will result in an attractive, high quality finish you can enjoy for many years to come.
