ONDEK ULTRA ADVANTAGE

Experience the next generation of vinyl decking with Ondek's innovative Ultra features. We've engineered our system to address the most common and frustrating issues in the vinyl market, ensuring a durable, waterproof, and beautiful finish for every project. One of the most critical aspects of any vinyl deck installation is the integrity of its seams. Poor seam strength can lead to water damage, costly repairs, and a tarnished reputation. Ondek's Ultra Seam technology directly confronts this challenge, delivering a world-class waterproof weld that stands the test of time.

The Ultra Edge system integrates our Ultra Flashing and Ultra Clip into a single, elegant solution that eliminates the problem of clips falling off after seasonal expansion and contraction.

ULTRA SEAM

Selvedge Edge for Pure Welds:
Our fleece-backed vinyl features a 1" selvedge edge, meaning the fleece backing stops short of the edge. This allows for a pure vinyl-to-vinyl weld, free from fleece remnants that can compromise seam integrity.

Architect-Approved Performance:
This uncontaminated weld is precisely what architects specify for long-term waterproof performance, ensuring your installations meet the highest standards.

The Best of Both Worlds:
Enjoy the dual benefits of a fleece back that conceals deck imperfections and a superior, long-lasting waterproof seam.

ULTRA EDGE

Positive, Screw-Free Connection:
The Ultra Edge creates a secure, mechanical connection without the need for screws.
The Ultra Clip simply snaps onto the Ultra Flashing for a clean and lasting fit.

Enhanced Durability:
This innovative system is designed to withstand the rigors of hot and cold weather, preventing the pulling and detachment common with traditional clips.

Improved Aesthetics:
The result is a clean, professional finish that maintains its integrity and appearance season after season.
